Country list

Yellow fever vaccination requirements and recommendations; and malaria situation

Introduction

The information provided for each country includes the country’s stated requirements for mandatory yellow fever vaccination, WHO recommendation for travellers regarding yellow fever vaccinations and details concerning the malaria situation and recommended prevention of the disease.2,3

Yellow fever

The risk of yellow fever transmission depends on the presence of the virus in the country either in humans, mosquitoes or animals. WHO will determine those areas where “a risk of yellow fever transmission is present” based on the following criteria: yellow fever has been reported currently or in the past plus vectors and animal reservoirs currently exist.

Yellow fever vaccination

Yellow fever vaccination is carried out for two different purposes:

1) To prevent the international spread of the disease by protecting countries from the risk of importing or spreading the yellow fever virus. These are mandatory requirements established by the country.

   The countries that require proof of vaccination are those where the disease may or may not occur and where the mosquito vector and potential non-human

---

1 For the purpose of this publication, the terms “country and countries” covers countries, territories and areas.

2 Please note that the requirements for vaccination of infants over 6 months of age by some countries are not in accordance with WHO’s advice (see Chapter 6). Travellers should however be informed that the requirement exists for entry into the countries concerned.

3 WHO publishes these requirements for informational purposes only; this publication does not constitute an endorsement or confirmation that such requirements are in accordance with the provisions of the IHR (2005).
primate hosts of yellow fever are present. Consequently, any importation of the virus by an infected traveller could result in its propagation and establishment, leading to a permanent risk of infection for the human population. Proof of vaccination is often required for travellers coming from countries with risk of yellow fever transmission (including, sometimes, for travellers transiting through such countries). However, some countries require proof of vaccination from all travellers. The international yellow fever vaccination certificate becomes valid 10 days after vaccination and remains valid for a period of 10 years. Countries requiring yellow fever vaccination for entry do so in accordance with the International Health Regulations. Country requirements are subject to change at any time. Updates can be found at www.who.int/ith. The country list in this chapter contains information on yellow fever requirements as provided by countries.

Travellers who possess an exemption from yellow fever vaccination, signed by an authorized medical officer or an authorized health worker, may nevertheless be allowed entry into a country, but may be required to be quarantined for not more than six days, reckoned from the date of last possible exposure to infection, or be placed under surveillance or required to report fever or other symptoms to the competent authority. Such travellers should be provided with information on how to protect themselves from yellow fever vectors.

2) To protect individual travellers who may be exposed to yellow fever infection

As yellow fever is frequently fatal for those who have not been vaccinated, vaccination is recommended for all travellers (with few exceptions - see Chapter 6) visiting areas where there is a risk of yellow fever transmission. An individual risk assessment based on duration of travel, activities during travel, risk of exposure, medical history, age and previous immunization status is indicated.

The fact that a country has no mandatory requirement for vaccination does not imply that there is no risk of yellow fever transmission.

Annex 1 provides a summary list of countries with risk of yellow fever transmission in whole or in part as well as a list of countries that require proof of yellow fever vaccination as a condition for entry.

Other diseases

Cholera. No country reports a requirement for a certificate of vaccination against cholera as a condition for entry. For information on selective use of cholera vaccines, see Chapter 6.
Smallpox. Since the global eradication of smallpox was certified in 1980, WHO does not recommend smallpox vaccination for travellers.

Other infectious diseases. Information on the main infectious disease threats for travellers, their geographical distribution, and corresponding precautions are provided in Chapter 5. Chapter 6 provides information on vaccine-preventable diseases.

Malaria

General information about the disease, its geographical distribution and details of preventive measures are included in Chapter 7. Protective measures against mosquito bites are described in Chapter 3. Specific information for each country is provided in this section, including epidemiological details for all countries with malarious areas (geographical and seasonal distribution, altitude, predominant species, reported resistance). The recommended prevention is also indicated. The recommended prevention for each country is decided on the basis of the following factors: the risk of contracting malaria; the prevailing species of malaria parasites in the area; the level and spread of drug resistance reported from the country; and the possible risk of serious side-effects resulting from the use of the various prophylactic drugs. Where *Plasmodium falciparum* and *P. vivax* both occur, prevention of falciparum malaria takes priority.

The numbers I, II, III and IV refer to the type of prevention based on the table below.

<table>
<thead>
<tr>
<th>Malaria risk</th>
<th>Type of prevention</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type I</td>
<td>Very limited risk of malaria transmission</td>
</tr>
<tr>
<td>Type II</td>
<td>Risk of <em>P. vivax</em> malaria only; or fully chloroquine-sensitive <em>P. falciparum</em></td>
</tr>
<tr>
<td>Type III</td>
<td>Risk of <em>P. vivax</em> and <em>P. falciparum</em> malaria transmission, combined with emerging chloroquine resistance</td>
</tr>
<tr>
<td>Type IV</td>
<td>(1) High risk of <em>P. falciparum</em> malaria, in combination with reported antimalarial drug resistance; or (2) Moderate/low risk of <em>P. falciparum</em> malaria, in combination with reported high levels of drug resistance</td>
</tr>
</tbody>
</table>

1 Alternatively, when travelling to rural areas with multidrug-resistant malaria and only a very low risk of *P. falciparum* infection, mosquito bite prevention can be combined with stand-by emergency treatment.

Malaria: Malaria risk—exclusively due to *P. vivax*—is very low and is confined to rural areas along the borders with Bolivia (lowlands of Jujuy and Salta provinces) and with Paraguay (lowlands of Corrientes and Misiones provinces).
Recommended prevention in risk areas: II

ARMENIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no
Malaria: Malaria risk—exclusively due to *P. vivax*—may exist focally from June through October in some villages located in Ararat Valley, mainly in the Masis district. No risk in tourist areas. No indigenous cases reported since 2006.
Recommended prevention in risk areas: I

AUSTRALIA
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age entering Australia within 6 days of having stayed overnight or longer in a country with risk of yellow fever transmission, as listed in the *Weekly Epidemiological Record*.
Yellow fever vaccine recommendation: no

AUSTRIA
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

AZERBAIJAN
Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no
Malaria: Malaria risk—exclusively due to *P. vivax*—exists from June through October in lowland areas, mainly in the area between the Kura and the Arax rivers.
Recommended prevention in risk areas: II

AZORES see PORTUGAL

BAHAMAS
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Sporadic local transmission of *P. falciparum* has been reported in recent years on Great Exuma island only, subsequent to international importation of parasites. No risk on other islands.
Recommended prevention on Great Exuma: I

BAHRAIN
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

BANGLADESH
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Malaria risk exists throughout the year in the whole country excluding Dhaka city. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: IV

BARBADOS
Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

</table>
**BRAZIL**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: yes – for travellers over 9 months of age going to the following areas at risk for yellow fever transmission, including the ENTIRE states of Acre, Amapá, Amazonas, Distrito Federal (including the capital city of Brasilia), Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Rondônia, Roraima and Tocantins, and the designated areas of the following states: north-west and west Bahia, central and west Paraná, south-west Piauí, north-west and west central Rio Grande do Sul, far west Santa Catarina, and north and west São Paulo. Vaccination is recommended for travellers visiting Iguazu Falls. Vaccination is not recommended for travel to the following coastal cities: Rio de Janeiro, São Paulo, Salvador, Recife and Fortaleza.

Malaria: In the states outside “Legal Amazonia”, the risk of malaria transmission is negligible or non-existent. Malaria risk—P. vivax (80%), P. falciparum (19%)—is present in most forested areas below 900 m within the nine states of the “Legal Amazonia” region (Acre, Amapá, Amazonas, Maranhão (western part), Mato Grosso (northern part), Pará (except Belém City), Rondônia, Roraima and Tocantins (western part)). Transmission intensity varies from one municipality to another, and is higher in jungle areas of mining, agricultural settlements less than 5 years old, and in some peripheral urban areas of Manaus, Porto Velho and Cruzeiro do Sul. Malaria also occurs on the periphery of large cities such as Boa Vista, Macapá, Maraba, Rio Branco and Santarém. Multidrug-resistant P. falciparum reported.

Recommended prevention in risk areas: IV

**BRITISH VIRGIN ISLANDS**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

**BRUNEI DARUSSALAM**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission or having passed through areas partly or wholly at risk of yellow fever transmission within the preceding 6 days.

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no
Malaria: Limited malaria risk—exclusively due to *P. vivax*—exists in some southern areas.
Recommended prevention in risk areas: I

**DOMINICA**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**DOMINICAN REPUBLIC**

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no
Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year, especially in the western provinces of Azua, Bahoruco and Dajabón and in La Altagracia province. Risk in other areas is low to negligible. There is no evidence of *P. falciparum* resistance to any antimalarial drug.
Recommended prevention in risk areas: II

**ECUADOR**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: yes
Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV
transmission. Nationals and residents of Ecuador are required to possess certificates of vaccination on their departure to an area with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes; recommended when travelling to provinces in the Amazon Basin (Orellana, Morona, Napo, Pastaza, Sucumbios and Zamora) and to other areas in the eastern part of the Andes mountains. There is no risk of yellow fever transmission in the cities of Guayaquil and Quito or in the Galapagos islands.

Malaria: Malaria risk—P. vivax (88%), P. falciparum (12%)—exists throughout the year below 1500 m, with moderate transmission risk in coastal provinces. There is no risk in Guayaquil, Quito and cities of inter-Andean region. P. falciparum resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

EGYPT

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission. The following countries and areas are regarded as countries with risk of yellow fever transmission;

America: Belize, Bolivia, Brazil, Colombia, Costa Rica, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Trinidad and Tobago, Venezuela.

Air passengers in transit coming from these countries or areas without a certificate will be detained in the precincts of the airport until they resume their journey.

All arrivals from Sudan are required to possess either a vaccination certificate or a location certificate issued by a Sudanese official centre stating that they have not been in Sudan south of 15°N within the previous 6 days.

Yellow fever vaccine recommendation: no

Malaria: Very limited P. falciparum and P. vivax malaria risk may exist from June through October in El Faiyum governorate (no indigenous cases reported since 1998).

Recommended prevention: none

EL SALVADOR

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 6 months of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Very low malaria risk—almost exclusively due to P. vivax—exists in rural areas of migratory influence from Guatemala. Sporadic vivax malaria cases are reported from other parts of the country.

Recommended prevention in risk areas: I

EQUATORIAL GUINEA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk—predominantly due to P. falciparum—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

ERITREA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to P. falciparum—exists throughout the year in the whole country below 2200 m. There is no risk in Asmara. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine reported.
Recommended prevention: **IV**
### Guinea-Bissau

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission, and from the following countries:

- **America**: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Venezuela.

Yellow fever vaccine recommendation: yes

**Malaria**: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

### Guyana

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission with the exception of Trinidad and Tobago, Paraguay and Argentina. A YF certificate of vaccination is also required for travellers from Belize.

Yellow fever vaccine recommendation: yes

**Malaria**: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in all parts of the interior. Highest risk occurs in Regions 1, 7, 8 and 9; moderate risk in Region 2 and 10; and very low risk in Regions 3, 4, 5 and 6. Sporadic cases of malaria have been reported from the densely populated coastal belt. Chloroquine-resistant *P. falciparum* reported.

Recommended prevention in risk areas: IV

### Haiti

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

### Hong Kong Special Administrative Region of China

**Yellow fever**

Country requirement: anyone (except infants up to the age of 6 months) arriving by air or sea without a certificate is detained in isolation for up to 6 days if that person (i) arrives within 6 days of departure from an area with risk of yellow fever transmission, or (ii) has been in such an area in transit (except those passengers and members

Yellow fever vaccine recommendation: no

**Malaria**: Malaria risk—exclusively due to *P. falciparum*—exists throughout the year in the whole country, including coastal and border zones. Risk in the main urban areas of Port-au-Prince is considered to be very low. No *P. falciparum* resistance to chloroquine reported.

Recommended prevention in risk areas: II

### Hungary

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

### Iceland

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

### India

**Yellow fever**

Country requirement: no

**Malaria**: Malaria risk—exclusively due to *P. falciparum*—exists throughout the year in the whole country, including coastal and border zones. Risk in the main urban areas of Port-au-Prince is considered to be very low. No *P. falciparum* resistance to chloroquine reported.

Recommended prevention in risk areas: II

---

203
of the crew who, while in transit through an airport situated in an area with risk of yellow fever transmission, remained within the airport premises during the period of their entire stay and the Health Officer agrees to such exemption), or (iii) has come on a ship that started from or touched at any port in a yellow fever area with risk of yellow fever transmission up to 30 days before its arrival in India, unless such a ship has been disinfected in accordance with the procedure laid down by WHO, or (iv) has come by an aircraft which has been in an area with risk of yellow fever transmission and has not been disinfected in accordance with the provisions laid down in the Indian Aircraft Public Health Rules, 1954, or those recommended by WHO. The following countries and areas are regarded as risk of yellow fever transmission:

America: Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Panama, Peru, Suriname, Trinidad and Tobago, Venezuela.

Note. When a case of yellow fever is reported from any country, that country is regarded by the Government of India as a country with risk of yellow fever and is added to the above list.

Yellow fever vaccine recommendations: no

Malaria: Malaria risk exists throughout the year in all areas of the five eastern provinces of Papua, West Papua, Maluku, North Maluku and East Nusa Tenggara. In the other parts of the country, there is malaria risk in some districts, except in Jakarta Municipality, big cities, and within the areas of the main tourist resorts. 

Recommended prevention in risk areas: IV

INDONESIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk due to \( P. falciparum \) and \( P. vivax \) exists from March through November in rural areas of the provinces of Hormozgan, Kerman (tropical part) and the southern part of Sistan-Baluchestan. \( P. falciparum \) resistant to chloroquine and sulfadoxine-pyrimethamine reported. \( P. vivax \) resistant to chloroquine reported.

Recommended prevention in risk areas: IV

IRAN (ISLAMIC REPUBLIC OF)

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk due to \( P. falciparum \) and \( P. vivax \) exists from May through November in areas in the north below 1500 m (Duhok, Erbil and Sulaimaniya provinces).

Recommended prevention in risk areas: II

IRAQ

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Limited malaria risk—exclusively due to \( P. vivax \)—exists from May through November in areas in the north below 1500 m (Duhok, Erbil and Sulaimaniya provinces).

Recommended prevention in risk areas: II

Yellow fever vaccine recommendation: no

---

**MONTSERRAT**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

---

**MOROCCO**

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no

---

**MOROCCO**

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no

---

**MOROCCO**

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no

**Mozambique**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission. Nationals and residents of Myanmar are required to possess certificates of vaccination on their departure to an area with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year at altitudes below 1000 m, excluding the main urban areas of Yangon and Mandalay. Risk is highest in remote rural, hilly and forested areas. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. Mefloquine resistance reported in Kayin state and the eastern part of Shan state. *P. vivax* with reduced sensitivity to chloroquine reported. Human *P. knowlesi* infection reported (see page 156).
Recommended prevention in risk areas: IV

---

**MIRA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission. The countries, or parts of countries, included in the endemic zones in Africa and South America...
are regarded as areas with risk of yellow fever transmission. Travellers on scheduled flights that originated outside the countries with risk of yellow fever transmission, but who have been in transit through these areas, are not required to possess a certificate provided that they remained at the scheduled airport or in the adjacent town during transit. All passengers whose flights originated in countries with risk of yellow fever transmission or who have been in transit through these countries on unscheduled flights are required to possess a certificate. The certificate is not insisted upon in the case of children under 1 year of age, but such infants may be subject to surveillance. Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists from November to June in the following regions: Ohangwena, Omaheke, Omusati, Oshana, Oshikoto and Otjozondjupa. Risk throughout the year exists along the Kunene river and in Caprivi and Kavango regions. Resistance to chloroquine and sulfadoxine–pyrimethamine reported. Recommended prevention in risk areas: IV

### NAURU

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission. Yellow fever vaccine recommendation: no

### NEPAL

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission. Yellow fever vaccine recommendation: no

### NETHERLANDS

**Yellow fever**

Country requirement: no
Yellow fever vaccine recommendation: no

### NETHERLANDS ANTILLES (BONAIRE, CURAÇAO, SABA, ST EUSTASIA, ST. MARTIN)

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 6 months of age coming from countries with risk of yellow fever transmission. Yellow fever vaccine recommendation: no

### NEW CALEDONIA AND DEPENDENCIES

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission. Note. In the event of an epidemic threat to the territory, a specific vaccination certificate may be required. Yellow fever vaccine recommendation: no

### NEW ZEALAND

**Yellow fever**

Country requirement: no
Yellow fever vaccine recommendation: no

### NICARAGUA

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission. Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to *P. vivax* (92%)—exists throughout the year in a number of municipalities. Moderate to high risk municipalities are mostly in Chinandega, Managua, Matagalpa, León, RA Atlántico Norte and RA Atlántico Sur. Cases are reported from other municipalities in the central and western department but the risk in these areas is considered low or negligible. No chloroquine-resistant *P. falciparum* reported. Recommended prevention in risk areas: II
NIGER

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age and recommended for travellers leaving Niger.

Yellow fever vaccine recommendation: yes; for all travellers over 9 months of age travelling to southern areas of the Sahara desert.

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Chloroquine-resistant *P. falciparum* reported.

Recommended prevention: IV

NIGERIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

NIUE

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

NORFOLK ISLAND see AUSTRALIA

NORTHERN MARIANA ISLANDS

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

NORWAY

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

OMAN

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Sporadic transmission of *P. falciparum* and *P. vivax* reported until 2003, and again in 2007 (4 cases of *P. vivax* only), subsequent to international importation of parasites.

Recommended prevention: none

PAKISTAN

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from any part of a country in which there is a risk of yellow fever transmission; infants under 6 months of age are exempt if the mother’s vaccination certificate shows that she was vaccinated before the birth of the child.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk—*P. vivax* and *P. falciparum*—exists throughout the year in the whole country below 2000 m. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV

PALAU

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age coming from countries with risk of yellow fever transmission or from countries in any part of which there is a risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

PANAMA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from all travellers coming from countries with risk of yellow fever transmission

Yellow fever vaccination recommendation: yes; for all travellers over 9 months of age travelling to...
the provinces of Comarca Emberá, Darién, Kuna Yala (old San Blas) and Panama east of the Canal Zone, excluding the Canal Zone, Panama City and San Blas Islands.

**Malaria:** Malaria risk—*P. vivax* (97%); *P. falciparum* (3%)—exists throughout the year in provinces along the Atlantic coast and the border with Colombia: Bocas del Toro, Colon, Darién, Ngobe Buglé, Panama and Veraguas. In Panama City, the Canal zone, and in the other provinces there is no or negligible risk of transmission. Chloroquine-resistant *P. falciparum* has been reported in Darién and San Blas provinces.

Recommended prevention in risk areas: II; in eastern endemic areas: IV

**PAPUA NEW GUINEA**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country below 1800 m. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. *P. vivax* resistant to chloroquine reported.

Recommended prevention in risk areas: IV

**PARAGUAY**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over the age of 1 coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes; for all travellers over 9 months of age.

**Malaria:** Malaria risk—almost exclusively due to *P. vivax*—is moderate in certain municipalities of the departments of Alto Paraná, Caaguazú and Canindeyú. In the other departments there is no or negligible transmission risk.

Recommended prevention in risk areas: II

**PERU**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: yes; recommended for those who intend to visit the jungle areas of the country below 2300m. Travellers who will only visit the cities of Cuzco and Machu Picchu do not need vaccination.

**Malaria:** Malaria risk—*P. vivax* (85%), *P. falciparum* (15%)—exists throughout the year in rural areas at altitudes below 2000m. The 23 highest risk districts are concentrated in the departments of Ayacucho, Junín, Loreto, Madre de Dios and San Martin. Ninety eight percent of *P. falciparum* cases are reported from Loreto, the department situated in the Amazon which also harbours 18 of the highest risk districts in the country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: II in *P. vivax* risk areas; IV in Department of Loreto.

**PHILIPPINES**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk exists throughout the year in areas below 600 m, except in the 22 provinces of Aklan, Albay, Benguet, Biliran, Bohol, Camiguin, Capiz, Catanduanes, Cavitè, Cebu, Guimaras, Iloilo, Northern Leyte, Southern Leyte, Marinduque, Masbate, Eastern Samar, Northern Samar, Western Samar, Sequijor, Sorsogon, Surigao Del Norte and metropolitan Manila. No risk is considered to exist in urban areas or in the plains. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. Human *P. knowlesi* infection reported in the province of Palawan (see page 156).

Recommended prevention in risk areas: IV

**PITCAIRN**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported. Recommended prevention: IV

SINGAPORE

Yellow fever
Country requirement: certificates of vaccination are required from travellers over 1 year of age who, within the preceding 6 days, have been in or have passed through any country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: One case of human *P. knowlesi* infection reported (see page 156).
Recommended prevention in risk areas: I

SLOVAKIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SLOVENIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SOLOMON ISLANDS

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year except in a few eastern and southern outlying islets. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: IV

SOUTH AFRICA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the low altitude areas of Mpumalanga Province (including the Kruger National Park), Northern Province and north-eastern KwaZulu-Natal as far south as the Tugela River. Risk is highest from October to May. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: IV

SPAIN

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

SRI LANKA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria: Relatively low malaria risk—*P. vivax* (88%), *P. falciparum* (12%)—exists throughout the year, except in the districts of Colombo, Galle, Gampaha, Kalutara, Matara and Nuwara Eliya. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention in risk areas: III

SUDAN

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 9 months
of age coming from countries with risk of yellow fever transmission. A certificate may be required from travellers leaving Sudan.

Yellow fever vaccine recommendation: yes; for all travellers over 9 months of age travelling to southern areas of the Sahara desert, excluding the city of Khartoum.

Malaria: Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Risk is low and seasonal in the north. It is higher in the central and southern part of the country. Malaria risk on the Red Sea coast is very limited. Resistance to chloroquine and sulfadoxine–pyrimethamine reported. Recommended prevention: IV

**SURINAME**

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria: Malaria risk—*P. falciparum* (48%), *P. vivax* (47%)—has decreased in recent years. It occurs throughout the year in the interior of the country beyond the coastal savannah area, with highest risk mainly along the eastern border and in gold mining areas. In Paramaribo city and the other seven coastal districts, transmission risk is low or negligible. Chloroquine, sulfadoxine–pyrimethamine and mefloquine resistant *P. falciparum* reported. Some decline in quinine sensitivity also reported.

Recommended prevention in risk areas: IV

**SWAZILAND**

Yellow fever
Country requirement: no

Malaria: Malaria risk—predominantly due to *P. vivax*—exists from June through October, particularly in southern border areas (Khatlon Region), and in some central (Dushanbe), western (Gorno-Badakhshan), and northern (Leninabad Region) areas. Chloroquine and sulfadoxine–pyrimethamine resistant *P. falciparum* reported in the southern part of the country.

Recommended prevention in risk areas: III

**THAILAND**

Yellow fever
Country requirement: no

Malaria: Malaria risk exists throughout the year in rural, especially forested and hilly, areas of the whole country, mainly towards the international borders, including the southernmost provinces.

SWEDEN

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

SWITZERLAND

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

SYRIAN ARAB REPUBLIC

Yellow fever
Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Very limited malaria risk—exclusively due to *P. vivax*—may exist from May through October in foci along the northern border, especially in rural areas of El Hasaka Governorate (no indigenous cases reported since 2005).

Recommended prevention: none

TAJIKISTAN

Yellow fever
Country requirement: no

Yellow fever vaccine recommendation: no

Malaria: Malaria risk—predominantly due to *P. vivax*—exists from June through October, particularly in southern border areas (Khatlon Region), and in some central (Dushanbe), western (Gorno-Badakhshan), and northern (Leninabad Region) areas. Chloroquine and sulfadoxine–pyrimethamine resistant *P. falciparum* reported in the southern part of the country.

Recommended prevention in risk areas: III
There is no risk in cities (e.g. Bangkok, Chiangmai city, Pattaya), Samui island and the main tourist resorts of Phuket island. However, there is a risk in some other areas and islands. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported. Resistance to mefloquine and to quinine reported from areas near the borders with Cambodia and Myanmar. Human *P. knowlesi* infection reported (see page 156).

Recommended prevention in risk areas: I; in areas near Cambodia and Myanmar borders: IV

**THE FORMER YUGOSLAV REPUBLIC OF MACEDONIA**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. *P. falciparum* resistant to chloroquine and sulfadoxine–pyrimethamine reported.
Recommended prevention: IV

**TOGO**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.
Yellow fever vaccine recommendation: yes

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Chloroquine-resistant *P. falciparum* reported.
Recommended prevention: IV

**TOKELAU**

Same requirements as New Zealand. (Non-self governing territory of New Zealand)

**TONGA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**TRINIDAD AND TOBAGO**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: yes; for all travellers over 9 months of age whose itinerary includes Trinidad. Vaccination is not recommended for those visiting only Tobago.

**TUNISIA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**TURKEY**

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—exclusively due to *P. vivax*—exists from May to October in the south-eastern part of the country. There is no malaria risk in the main tourist areas in the west and south-west of the country.
Recommended prevention in risk areas: II

**TURKMENISTAN**

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—exclusively due to *P. vivax*—exists from June to October in some villages located in the south-eastern part of the country bordering Afghanistan. No indigenous cases reported since 2006.
Recommended prevention in risk areas: I

**Malaria:** Low to moderate malaria risk—predominantly due to *P. falciparum*—exists throughout the year in some rural areas of Amazonas, Bolivar, Delta Amacuro, Monagas and Sucre states. There is low risk in Apure, Anzoátegui, Táchira and Zulia. Risk of *P. falciparum* malaria is mostly restricted to municipalities in jungle areas of Amazonas (Alto Orinoco, Atabapo, Atures, Autana, Manapiare, Rio Negro) and Bolivar (Cedeño, Heres, Gran Sabana, Piar, Raul Leoni, Rocío, Sifontes and Sucre). Chloroquine
and sulfadoxine–pyrimethamine resistant *P. falciparum* reported.

Recommended prevention in risk areas: II in *P. vivax* risk areas; IV in *P. falciparum* risk areas.

**VIET NAM**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers over 1 year of age coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the whole country, excluding urban centres, the Red River delta, the Mekong delta, and the coastal plains of the central Viet Nam. High-risk areas are the highland areas below 1500 m south of 18°22′N, notably in the 4 central highlands provinces Dak Lak, Dak Nong, Gia Lai and Kon Tum, Binh Phuoc province, and the western parts of the coastal provinces Quang Tri, Quang Nam, Ninh Thuan and Khanh Hoa. Resistance to chloroquine, sulfadoxine–pyrimethamine and mefloquine reported.

Recommended prevention in risk areas: IV

**ZAMBIA**

**Yellow fever**

Country requirement: no

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists throughout the year in the whole country. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention: IV

**ZIMBABWE**

**Yellow fever**

Country requirement: a yellow fever vaccination certificate is required from travellers coming from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Malaria risk—predominantly due to *P. falciparum*—exists from November through June in areas below 1200 m and throughout the year in the Zambezi valley. In Harare and Bulawayo, the risk is negligible. Resistance to chloroquine and sulfadoxine–pyrimethamine reported.

Recommended prevention in risk areas: IV
